 - Pavillion Area Water Supply Level I Study, Final Report
(http://library.wrds.uwyo.edu/wwdcrept/Pavillion/Pavillion-Water_Supply_Level_I_Study-Final_Report-2011.html)
 - Pavillion Area Water Supply Level I Study Extension
(http://library.wrds.uwyo.edu/wwdcrept/Pavillion/Pavillion-Water_Supply_Level_I_Study-Extension_Report-2012.html)
 - Pavillion Area Water Supply Level II Study, Final Report
(http://library.wrds.uwyo.edu/wwdcrept/Pavillion/Pavillion_Area-Water_Supply_Level_II_Study-Final_Report-2013.html)
- ☐ Cistern Water System – Cistern Loading Station
 - Project – Pavillion East Water Supply Project
(<http://legisweb.state.wy.us/2012/Enroll/SF0047.pdf> - see page 13-14)
- ☐ Water Delivery

Conference call with Pavillion area residents on September 17, 2013 to provide update.

- ☐ Evaluation of the Town of Pavillion as the primary entity to deliver water to residents.
 - Rate structure.
 - Funding sources, including grants.
 - Other considerations: permits (Department of Agriculture and State Engineer's Office), staffing, etc.
- ☐ Cistern Water System – Cistern Loading Station

The following is an update of the most recent developments:

- ☐ Water delivery fund (managed by the Wyoming Association of Rural Water Systems) – as of October 31, 2013 there is \$66,149.55 left in the account. Average monthly usage is between \$1,600.00 and \$2,000.00 per month.
- ☐ The Town of Pavillion has established a water rate of \$38.75 per 4,000 gallons.
- ☐ The Town of Pavillion has decided to table additional evaluation of water delivery to residents to allow private contractors to evaluate the opportunity. If no private contractor is available or delivery costs are unreasonable, the Town of Pavillion will consider this matter further.
- ☐ James Gores and Associates have contracted with Viper Underground, Inc. to install a water loading station in the Town of Pavillion and cisterns at rural residences.
- ☐ Viper Underground, Inc. has started construction of the Town of Pavillion water loading station. The water loading station is the first construction priority.
- ☐ The cistern (1,500-gallon tanks) are on order – 2 tanks per cistern. James Gores and Associates and Viper Underground, Inc. are developing a schedule for the cistern installations. Viper Underground, Inc. was given Notice-To-Proceed on Monday November 11, 2013.

A meeting with Pavillion area residents is planned for mid-December. Planned topics include round one of cistern installation, round two of cistern installation, and water delivery (including funding options).
